## **DETAILED ACTION**

## Response to Amendment

1. Applicant's request for reconsideration of the finality of the rejection of the last Office action is persuasive and, therefore, the finality of that action is withdrawn. All previously made rejections are now withdrawn in light of Applicant's remarks and accompanying Declaration, which is acknowledged and has been placed in the file. Applicant's arguments with respect to claims 1-35 have been considered but are moot in view of the new ground(s) of rejection.

## Claim Rejections - 35 USC § 103

- 2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 3. Claims 1-35 are rejected under 35 U.S.C. 103(a) as being unpatentable over US 2004/0151865 A1 issued to Howland in view of USPN 5357726 issued to Effenberger et al.
- 4. Howland discloses making high strength fabrics, which may be used in making radomes [0002, 0003]. Said fabrics can be made from VECTRAN™ [0013]. The Examiner is equating these fibers to be the same fibers that polyester-polyacrylate fibers desired by Applicant. Said fabrics may be woven, knitted and made into composites having several layers [0028]. Said composite can then be made to any desired length or width to form a laminated fabric structure. The fibers or fabrics may be joined together by thermoplastic resin, such as urethanes, and may penetrate into the fibers bundles. In paragraph 0041 onwards the application teaches that the fabric composite may be additionally coated or joined with

Application/Control Number: 10/620,884

Art Unit: 1771

various substances. Howland does not expressively suggest that this layer is hydrophobic in nature. This deficiency is remedied by the teachings of Effenberger.

Effenberger et al teach flexible reinforced textile composites which include an outer hydrophobic protective film layer (abstract). Said film layer comprises at least one or more films, at least one of which comprises a TFE polymer, preferably PTFE, or TFE, HFP or VF2. These films may be applied by any know technique in the art such as melt extrusion, casting, skiving, and paste extrusion (column 4). A person having ordinary skill in the art at the time the invention was made would have found it obvious to have made the outermost layer of the composite of Howland to be a waterproof layer. One would have been motivated to do this as (as shown in column 3, lines 5-11) to create an end product which has the ability to resist the deleterious effects of liquid water.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Ms. Arti Singh whose telephone number is 571-272-1483. The examiner can normally be reached on M-T 9-5:30pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Terrel Morris can be reached on 571-272-1478. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
